

If
we have this, no need to go back to the project list to see the total amount of this project
We need also to have inside the project separate for the summary
See sample:

Purchase Order List

10	 Yes	Implementation	Globe Homerun Project	7,982.3	7,982.3	0	NCR3_CA

No numbers and the total amount for every projects not yet see here inside the project.

See all the data in 1 slide
 if we select the bars/page that we want to see
 If we have this on system, we can easily see all the line items

If we have 283 record, you can select 500 to see all. So meaning if your site that you need to find is in the center, you don't need to next page, next page. Just select all the record items then scroll down only

Total 283 bars

20 Bars / Page

If we need to find the site in the center, you need to next page, next page because you don't know the exact page . We can search but if we need to see the 2 sites or 3 sites, we can't compare it IT do before show all sites but the system is Log but I think we need to have a selection only like the sample above. Because other system can do it and faster if we do it like that, we can improve more our system.
